Dear Vanessa Erasun,
Thank you for your interest in our version of the HBV model. The password for the HBV-light software is "H2K_w@ter". The password for the catchment data is "Wasser".
More information on HBV-light is given in our HESS-paper "Teaching hydrological modeling with a user-friendly catchment-runoff-model software package", see http://www.hydrol-earth-syst-sci.net/16/3315/2012/hess-16-3315-2012.html
Best regards,
Jan Seibert
